

# Syed Fazil Basheer

## Senior Software Engineer — Ruby on Rails, integrations & data movement

+91 99406 89619 • hey@fazzle.dev • fazzle.dev • github.com/fazzledev • linkedin.com/in/fazil-basheer-syed • Coimbatore, India

Twelve years building and running Rails applications. Recent work concentrates on integrations with systems I do not control — **webhook ingestion, idempotent receivers, and migrations that cut over without downtime**. Five years at Donorbox, two as engineering manager; now back to building full time.

### EXPERIENCE

Jun 2026 —  
present  
3 mo

#### Software Engineer / Gameday

- Self-hosted Rails product for recurring football groups, built to production standards rather than as a business. Reconciles UPI payments to players through **one idempotent ingestion endpoint that fails closed**, behind an append-only delivery audit log.

Jun — Jul 2026  
2 mo

#### Contract Software Engineer / Movement

- Designed and shipped the **\$mvt JavaScript SDK**, the authoring surface creators call from code blocks, and **snapshot-tested its signatures so re-typing a method breaks CI**, not just renaming it.

Jan — Mar 2026  
3 mo

#### Contract Software Engineer / Rate My Leads

Integration pipelines and lead scoring. Second-largest contributor as an outside contractor.

- Built **webhook ingestion for Intercom, Close.io and Airtable** end to end — signing keys to normalised events feeding a shared immutable event log — verifying HMAC signatures and timestamps and storing credentials encrypted.
- Made **every receiver idempotent with idempotency keys** so retries and overlapping deliveries are safe; persisted raw webhooks on receipt and normalised afterwards, so a parser bug never loses an event.
- Migrated the LLM layer off a hand-rolled client **across eleven sequenced deploys, dual-writing through the cutover** so scoring never went down. **97 merged PRs in ten weeks**.

Jun 2025 — Apr 2026  
11 mo

#### Software Engineer / OMR Report

Assessment analytics SaaS. Built, sold and supported solo, then acquired by Graavitons.

- Built a Crystal/Python/Ruby image pipeline reading smudged and photocopied answer sheets, **orchestrated as idempotent jobs that retry each stage independently**; made the field-block finder 11× faster.
- Designed a **provider-agnostic strategy layer** over Claude, OpenAI, DeepSeek, Gemini and local Ollama, parsing responses that carry prose outside the JSON fence rather than failing extraction.

Jul 2020 — May 2025  
4 yr 11 mo

#### Donorbox

**Engineering Manager** Feb 2023 — May 2025 **Team Leader** Sep 2021 — Jan 2023 **Developer** Jul 2020 — Aug 2021

- Built and maintained the **nonprofits database** — periodic scraping of official government sources across many countries plus the organisations' own sites — with change monitoring that reduced churn.
- Reimplemented the **signup flow** to cut steps and dropoffs, tailored per country from that database, and hardened the backend against fraudulent signups. Ran a multi-year i18n programme that opened European markets.
- Hired and managed data engineers and analysts; engineered **secure, private SQL generation from natural language** so data requests no longer queued. Mentored juniors on Ruby, Rails, Git and Minitest.

Aug 2019 — Jun 2020  
11 mo

#### Senior Developer / Kuvera

Digital gold, equity and loan-against-security for an investment platform.

- Built the referral rewards engine **reentrant and idempotent so a restart never paid twice**, dry-runnable to validate output without side effects, and trackable with step-by-step logs and skippable steps.
- Shipped RESTful APIs with controller tests and **API Blueprint documentation**; inherited request objects for third-party APIs (Augmont, Razorpay). Built Equity and LAS as **Rails Engines** on a shared Orders model.

Nov 2018 — Jul 2019  
9 mo

#### Developer / Code Astra

- Built back-end systems and the front-end interactions on top for Ally, an OKR product later acquired by Microsoft.

### TECHNICAL

|               |                                                                                                                 |
|---------------|-----------------------------------------------------------------------------------------------------------------|
| CORE          | Ruby, Ruby on Rails, JavaScript, TypeScript, Hotwire (Turbo/Stimulus)                                           |
| INTEGRATION   | REST APIs, webhooks, HMAC verification, idempotency keys, OAuth, rate limiting, retries and backoff, SDK design |
| DATA          | PostgreSQL, SQL, data modelling, query profiling and indexing, data migration, deduplication and reconciliation |
| TESTING & OPS | Minitest, RSpec, Playwright, fixtures, CI gates · Docker, Kamal, Redis, background jobs, audit logging          |

### EDUCATION

2011 — 2015

**Metallurgical Engineering & Materials Science did not complete** — Indian Institute of Technology Bombay, admitted through the IIT-JEE.
